## ABOUT

Hi! My name is Alina. I received my masters degree in engineering in 2018. In addition to studying at the university I started to learn software technologies, and started to learn Python. After finished course I wrote (developed) dissertation about energy efficiency of the plate **SOLAR COLLECTOR**. The main difficulty was when I developed my dissertation and I need to use JQUERY. It was difficulty because never before I didn't use this technology. Base on this, I decided to learn the front-end development.
